Xperience.

Deliver content anywhere with Kentico Xperience and a powerful headless API.

Extend Kentico Xperience with a headless API to publish content easily to any channel and execute headless CMS scenarios.

- Unlock your existing content in Kentico Xperience and make it available on any channel and device

- Deliver stunning digital experiences using modern JavaScript frameworks

- Leverage a highly-available cloud service and a global Content Delivery Network to deliver content anywhere in the world in no time

www.xperience.io

One consistent experience across all channels.

Create and manage content in Kentico Xperience and deliver it to a website, online store, mobile app, social media, chatbot, and more with ease and reliability.

A broad selection of SDKs.
Build applications faster with SDKs for popular programming languages.

Built-in CDN.
Deliver content quickly anywhere in the world with a Content Delivery Network powered by Fastly.

High availability.
Boost performance with an always-on headless API layer that runs on Microsoft Azure infrastructure.

How it works.

3 The headless API layer makes content available through its super-fast REST API and SDKs for all major platforms.

1 Create, approve, and publish content in Kentico Xperience.

2 Once the content is published, it is automatically synchronized to a Content Delivery Service that serves as a headless API layer.

Key features.

Secured Delivery API.
Quickly deliver your content to any application using a Delivery API. In addition, you can restrict the access to your content with a secure API key.
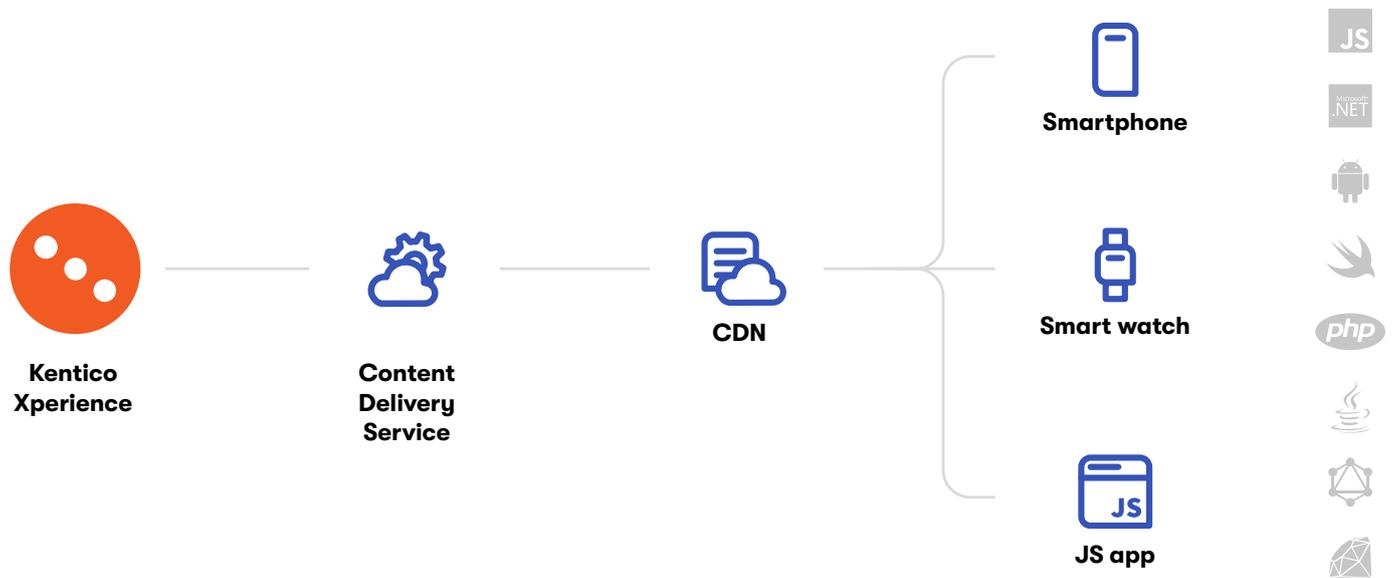

Management API.
Use our synchronization module or create your own content migration process to the headless API layer.

Scheduled publishing.
Set a publish date for your content which will then be published at a specific point in time.

Choice of the data center.
Choose to store your content in a data center in Europe, the United States, or in Australia.

Kentico Xperience → **Content Delivery Service** → **CDN** → **Smartphone** / **Smart watch** / **JS app**
